#### **Precautions For Use :**

#### **Over – current – proof**

Customer must apply resistors for protection, otherwise slight voltage shift will cause big current change (Burn out will happen)

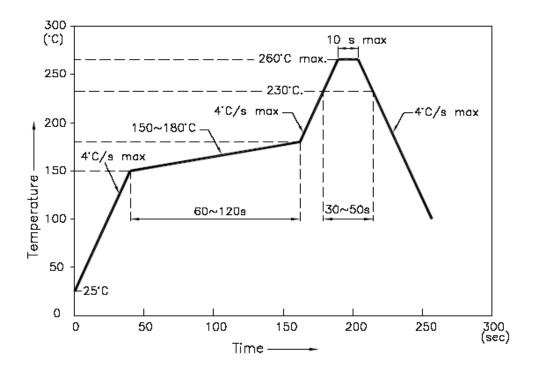

#### Storage

1. The operation of temperature and R.H. are  $: 5^{\circ}$ C  $\sim 30^{\circ}$ C,  $60^{\circ}_{0}$ R.H. Max.

2. Once the package is opened, the products should be used within a week. Otherwise, they should be kept in a dampproof box with desiccating regent. Considering the tape life, we suggest our customers to use our products within 1.5 year (from production date).

3. It's recommended to bake before soldering when the package is unsealed after 72 hrs. The condition is : 60°C±5°C for 15hrs.

#### ■ Reflow Temp/Time

#### NOTES:

- 1. We recommend the reflow temperature  $245^{\circ}C(\pm 5^{\circ}C)$ .the maximum soldering temperature should be limited to  $260^{\circ}C$ .
- 2. dont cause stress to the epoxy resin while it is exposed to high temperature.
- 3. Number of reflow process shall be 2 times or less.

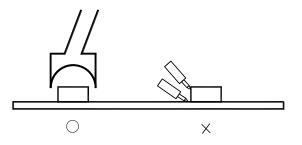

#### ■Soldering iron

Basic spec is  $\leq 5$ sec when 260°C. If temperature is higher, time should be shorter (+10°C  $\rightarrow$  -1sec ).Power dissipation of iron should be smaller than 20W, and temperatures should be controllable .Surface temperature of the device should be under 230°C .

#### Rework

- 1. Customer must finish rework within 5 sec under  $260^{\circ}$ C.
- 2. The head of iron can not touch copper foil
- 3. Twin-head type is preferred.

■ Avoid rubbing or scraping the resin by any object, during high temperature, for example reflow 
¬ solder etc.
