Precautions For Use :

Over - current - proof

Customer must apply resistors for protection, otherwise slight voltage shift will cause big current change (Burn out will happen)

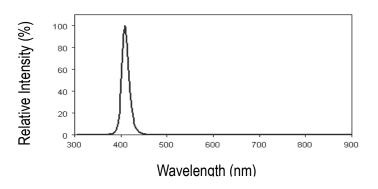

Storage

1. The operation of temperature and R.H. are : 5° C ~ 30° C , 60°_{0} R.H. Max.

- 2. Once the package is opened, the products should be used within a week. Otherwise, they should be kept in a dampproof box with desiccating regent. Considering the tape life, we suggest our customers to use our products within 1.5 year (from production date).
- 3. It's recommended to bake before soldering when the package is unsealed after 72 hrs. The condition is : $60^{\circ}C\pm 5^{\circ}C$ for 15hrs.

Directive Characteristics

■ Reflow Temp/Time

NOTES:

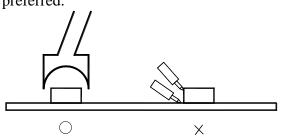

- 1. We recommend the reflow temperature $245^{\circ}C(\pm 5^{\circ}C)$.the maximum soldering temperature should be limited to $260^{\circ}C$.
- 2. dont cause stress to the epoxy resin while it is exposed to high temperature.
- 3. Number of reflow process shall be 2 times or less.

■Soldering iron

Basic spec is ≤ 5 sec when 260°C. If temperature is higher, time should be shorter (+10°C \rightarrow -1sec).Power dissipation of iron should be smaller than 20W, and temperatures should be controllable .Surface temperature of the device should be under 230°C .

Rework

- 1. Customer must finish rework within 5 sec under 260° C.
- 2. The head of iron can not touch copper foil
- 3. Twin-head type is preferred.

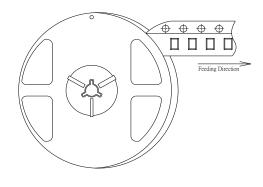

■ Avoid rubbing or scraping the resin by any object, during high temperature, for example reflow 、 solder etc.
